

Table 6-1. Crop Types, Acreages, and Values in Butte County

Crop Type	Crop	Acre in Study Area	Study Area Crop Value (\$)	County Crop Value (\$)	Percent of Countywide Crop Value
Citrus and subtropical	Kiwi	2	15,663	8,159,077	0.2%
Deciduous fruits and nuts	Prunes	45	91,235	25,135,580	0.4%
	Almonds	401	724,956	65,196,536	1.1%
	Almond hulls		13,369	1,772,916	0.8%
	Walnuts	2245	3,988,352	32,686,108	12.2%
Field	Safflower	331	69,793	126,509	55.2%
	Sugar beets (<i>note a</i>)	125	64,003	3,641,967	1.8%
	Sunflower	287	146,929	<i>note a</i>	4.0%
Grain and hay	Unspecified (<i>note b</i>)	1139	255,206	560,150	45.6%
	Oats	85	43,400	<i>note a</i>	1.2%
Truck, nursery, and berry	Beans (green) (<i>note c</i>)	207	141,920	549,280	25.8%
	Melons, squash, and cucumbers	51	34,701	<i>note c</i>	6.3%
Total		4918	5,589,527	137,828,123	

Notes

- a Acreage and production values for sunflower, sugar beets, and oats were not individually reported in 2000. Acres and production values reported by Butte County for "miscellaneous field crops" was used to estimate losses resulting from a reduction in production of sunflower, sugar beets, and oats.
- b Acreage and production values reported by Butte County for wheat was used to estimate the production value for land classified by DWR as unspecified grain crops ("G").
- c Acreage and production values for beans (green) and melons, squash, and cucumbers were not individually reported in 2000. The acreage and production value reported by Butte County for "miscellaneous vegetables" was used to estimate losses resulting from a reduction in production of beans (green) and melons, squash, and cucumbers.
