

Table 6-2. Crop Types, Acreages, and Values in Colusa County

Crop Type	Crop	Acres in Study Area	Study Area Crop Value (\$)	County Crop Value (\$)	Percent of Countywide Crop Value
Deciduous fruits and nuts					
	Prunes	436	607,015	5,702,410	10.6%
	Almonds	18	28,861	35,728,151	0.1%
	Almond hulls		733	1,043,484	0.1%
	Walnuts	1,014	1,362,098	5,712,032	23.8%
Field					
	Safflower	35	10,422	3,414,176	0.3%
	Beans (dry)	91	48,909	4,730,856	1.0%
Grain and hay					
	Unspecified (<i>note a</i>)	67	34,070	1,433,860	2.4%
Pasture					
	Mixed pasture (<i>note b</i>)	2	222	114,040	0.2%
Truck, nursery, and berry					
		51	100,977	1,011,770	10%
	Tomatoes	3	4,646	35,695,791	0.0%
Total		1,717	2,197,953		

Notes

- a Acreage and production value reported by the Colusa County Agricultural Commissioner's Office for white corn was used to estimate the production value of land classified by DWR as unspecified grain ("G").
- b Acreage and production value reported the Colusa County Agricultural Commissioner's Office for "pasture-irrigated" was used for lands classified as "mixed pasture" by DWR.
- c Acreage and production values for melons, squash, and cucumbers were not individually reported in 2000. Acreage and production value for "miscellaneous vegetable crops" was used to estimate losses resulting from a reduction in production of melons, squash, and cucumbers.
