

Table 6-4. Crop Types, Acreages, and Values in Tehama County

Crop Type	Crop	Acres in Study Area	Study Area Crop Value (\$)	County Crop Value (\$)	Percent of Countywide Crop Value
Citrus and subtropical	Kiwis (<i>notes a and b</i>)	0.2	193	3,692,750	0.0%
Deciduous fruits and nuts	Prunes	1,104	2,075,103	18,620,546	11.1%
	Almonds	202	365,234	11,907,212	3.1%
	Walnuts	2,031	2,788,943	16,461,292	16.9%
Field	Safflower	105	27,911	66,760	41.8%
	Corn (field/sweet)	99	45,372	598,998	7.6%
	Beans (dry)	307	178,812	698,121	25.6%
	Sunflower (<i>note f</i>)	252	174,191	219,751	79.3%
Grain and hay	Unspecified (<i>note c</i>)	10	1,782	181,308	1.0%
Pasture	Alfalfa and alfalfa mixtures	824	70,672	1,928,925	3.7%
	Mixed pasture	96	8,226	1,928,925	0.4%
Truck, nursery, and berry	Melons, squash, and cucumbers (<i>notes d and e</i>)	352	1,015,824	150,296	100.0%
Total		5,382	6,752,263		

a: Kiwi production value not reported by Tehama County. Per acre production value reported by Butte County was used in the absence of Tehama County data.

b: Tehama County did not report a separate value for Kiwis in 2000. Values for miscellaneous fruits and nuts were used as county totals.

c: Acreage and production values reported by the Tehama County Agricultural Commissioner's Office for "wheat" was used to estimate the production value of land classified by DWR as unspecified grain ("G").

d: Values for "vegetable crops" reported by Tehama County was used for melons, squash, and cucumbers.

e: DWR land use mapping indicated approximately 352 acres with the study area are planted to truck crops (melons, squash, and cucumbers). The Tehama County 2000 crop report indicates 52 acres of vegetable crops were planted in the entire county. To account for the loss in production from the 184.38 acres that would be removed from production, the per acre production value of \$3,081.72 based on the 52 acres reported in the Tehama County crop report was used.
